$\frac{1}{\sqrt{2}}$ range
 $\frac{1}{\sqrt{2}}$

Here, $\frac{1}{\sqrt{2}}$ and $\frac{1}{\sqrt{2}}$ are probability amplitudes, and their squared magnitudes determine the chances of measuring 0 or 1.

Key properties:

- **Superposition:** A qubit can represent a combination of 0 and 1 before measurement.
- **Measurement:** When measured, it produces a definite result—either 0 or 1.
- **Entanglement:** Qubits can be linked so that the state of one is correlated with another, even when separated.
- **Fragility:** Qubits are highly sensitive to noise and environmental disturbances.

Qubits can be made using systems such as superconducting circuits, trapped ions, photons, or electron spins.

CLOUD ANSWER

A **qubit** ("quantum bit") is the basic unit of information in a quantum computer.

Unlike a classical bit, which is either **0** or **1**, a qubit can exist in a **quantum superposition** of both states:

$$\begin{aligned} &| \psi \rangle = \alpha | 0 \rangle + \beta | 1 \rangle \end{aligned}$$

Here, α and β are probability amplitudes, and their squared magnitudes determine the chances of measuring 0 or 1.

Key properties:

- **Superposition:** A qubit can represent a combination of 0 and 1 before measurement.
- **Measurement:** When measured, it produces a definite result—either 0 or 1.
- **Entanglement:** Qubits can be linked so that the state of one is correlated with another, even when separated.
- **Fragility:** Qubits are highly sensitive to noise and environmental disturbances.

Qubits can be made using systems such as superconducting circuits, trapped ions, photons, or electron spins.

now i provided you the type of UI i want already ,

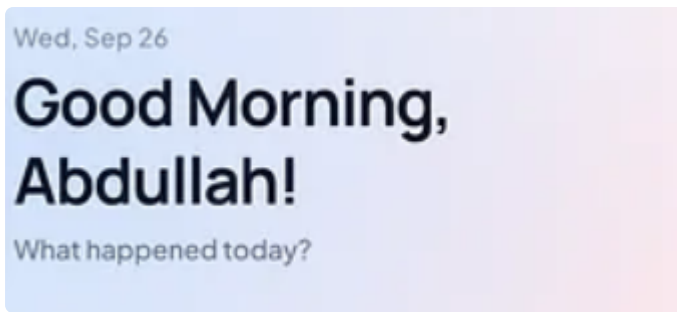

now the changes and the things i want i'm telling you

here the left there will be a toggle button of light and dark , in the right there will be a settings button and in the middle there will be a toggle between ask and memory section of our app , it should be like this image what i have just given and the middle should be like this

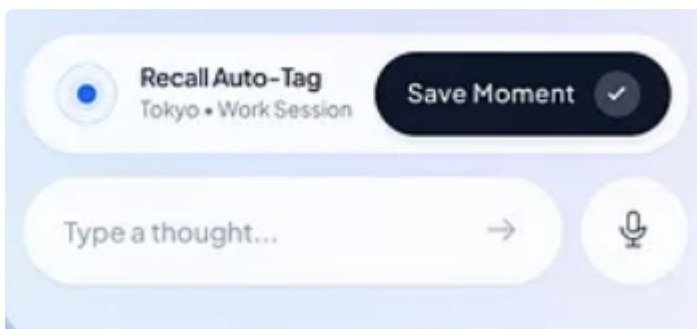

in the bottom i want the ask question part like this just in the part of voice section of current image there will be the ask button and the current part where the app tells that cloud search part figure out that part how u gonna impement it i gave you free will according to the whole app theme

in the ask page of main app add this type of section which will greet good morning , evening , night according to time and here will be the part after typing the question the answer will come just like gemini AI app

and also the text format where answers are coming is not so good that u have to fix the mathematical symbols and all

if a answer is coming from web then in the bottom u can create the save to memory button like this type of floating button after getting answer from cloud llm

and about the settings u can add some functionalities accoring to u whatever will go with this app

and try to follow this provided theme throughout the app
